

*Sandra
Cornea recipient
Chicago*

are **YOU** registered to be
an organ/tissue donor ?

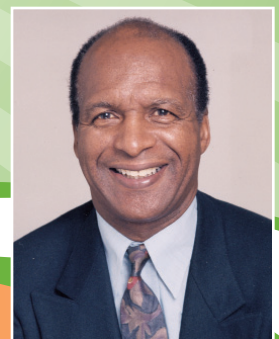

Sandra always had normal eyesight. So when things started to appear blurry and did not clear up, she got worried. Her doctor diagnosed her with Fuchs' Corneal Dystrophy, a genetic disease that only a cornea transplant can cure.

One year after being diagnosed, Sandra received a cornea transplant. Nine years later, the disease surfaced again and resulted in another transplant. Sandra is grateful for the gift of sight and wants everyone to know the importance of saying YES to donation!

Please join the Organ/Tissue Donor Registry today.

it's up to
YOU
